# Table of Contents

## Anesthesia
Ralph Harvey, DVM, MS, DACVAA
Anesthetic emergencies, crises, and high-risk cases.......................... 1
Clinical pain: How to prevent or manage it........................................ 3
Favorite techniques: Yours and mine, for restraint, sedation, and brief anesthesia................................................................. 8
Highly successful techniques simply using local and regional anesthetics .................................................................................. 10
Implementing the AAHA Anesthesia Guidelines for Dogs and Cats in your practice ......................................................... 12
New drugs and clinical techniques: What’s working for your hospital ......................................................................................... 15
Sedation and restraint for the fractious patient — safety and convenience for all .............................................................. 18

## Avian Medicine
Julia Whittington, DVM
Avian 911: Managing the emergent sick bird .................................... 20
Bird basics: Tips and tricks for performing primary techniques ................. 22
What’s your diagnosis? Avian diagnostic test options and results interpretation ........................................................................ 25

## Behavior
E’Lise Christensen, DVM, DACVB
Behavioral solutions: Present your case, leave with a plan. ......................... No Proceedings Required
Get lost! Stranger-directed aggression in cats ..................................... 29
Hit yourself with a newspaper: Practical treatment of house soiling by dogs ...................................................................................... 31
It’s not you, it’s me: Redirected aggression in cats and dogs.............. 33
Make it stop! Unruly behaviors and how vets, clients, and bad trainers accidentally make them worse ........................................ 34
Out the window: Multi-modal treatment options for thunderstorm phobia .................................................................................... 37
Safe at home: Quick and practical tips for owner-directed aggression in cats and dogs .............................................................. 39
Trigger time! Medication options for situational anxiety, panic, and phobia ................................................................................ 40

**Learn then Earn**
C’mon back kitties: How to increase your cat visits (and your bottom line) — with Karen Felsted, CPA, MS, DVM, CVPM ........................................ 42

Gary Landsberg, DVM, DACV, DECAWBM
5 easy pieces — how I treat them all .................................................. 44
Abnormal repetitive behavior: Circle, snap, and stare — oh my! ................................................................................................. 48
Dementia in dogs and cats: Identifying it and improving senior pets’ behavioral health .............................................................. 52
Stress: Its effects on pet health and behavior .................................... 55

## Avian Medicine
Julia Whittington, DVM
Avian 911: Managing the emergent sick bird .................................... 20
Bird basics: Tips and tricks for performing primary techniques ................. 22
What’s your diagnosis? Avian diagnostic test options and results interpretation ........................................................................ 25

Dementia in dogs and cats: Identifying it and improving senior pets’ behavioral health .............................................................. 52
Stress: Its effects on pet health and behavior .................................... 55

## Bovine Production Medicine
John Gilliam, DVM, DACVIM
Development of beef replacement heifers ........................................ 90
Diagnosing and managing vaginal infections ....................................... 94
Impact of vaccine choice on immunity and abortion risk (Part 1 and 2) ....................................................................................... 97
Managing preputial injuries in bulls .................................................. 102
Practical analgesia in food animal practice (Part 1 and 2) ......................... 105
Production indices for evaluating beef cow performance ...................... 109
Research update on physical methods of bovine euthanasia .................. 112

## Bovine Surgery
Sabrina Brounts, DVM, MS, DACVS, DECVS, DACVSMR
Bovine fracture repair ........................................................................ 114
C-Section in cattle ............................................................................ 115
Field anesthesia in cattle .................................................................... 117
Teat injuries in dairy cattle .................................................................. 119
Umbilical problems in calves ................................................................ 120
What’s new in gastrointestinal tract surgery in cattle? ......................... No Proceedings Provided

## Bovine Toxicology
Tim Evans, DVM, PhD, DACT, DABVT
Baby on board: Effects of poisons and medications on pregnancy and lactation ................................................................. 121
Fescue toxicosis update ..................................................................... 123
How to identify cause of death when it is NOT the vaccine or the feed ....................................................................................... 123

## Canine Sports Medicine
Laurie McCauley, DVM, DACVSMR, CCRT, CVA, CVC
Advanced soft tissue manual techniques ........................................ 125
Enhance your musculoskeletal exam: Secrets to the special tests.................................................................129
Fun with assistive devices: What you need to know...........133
How to make an athlete more competitive without injury.....135
Introduction to soft tissue manual techniques......................139
The secrets to working with working dogs.........................142

**Cardiology**
Sonya Gordon, DVM, DVSc, DACVIM
Cold paws, big heart: Treatment dilemmas in canine chronic valvular disease Part 1: Treatment for symptomatic patients ......................No Proceedings Provided
Cold paws, big heart: Treatment dilemmas in canine chronic valvular disease Part 2: What to do if the patient is asymptomatic ...............No Proceedings Provided
Cold paws, big heart: Treatment dilemmas in canine chronic valvular disease Part 3: Case presentations .................................................................No Proceedings Provided
The ABCDs of feline heart disease: Where are we in 2016? Part 1: Diagnosis ......................No Proceedings Provided
The ABCDs of feline heart disease: Where are we in 2016? Part 2: Treatment ...............No Proceedings Provided
The ABCDs of feline heart disease: Where are we in 2016? Part 3: Patient follow-up ....No Proceedings Provided

**Clinical Pathology**
Craig Thompson, DVM, DACVP
Big, bad bag of blood: Liver cytology .................................................................No Proceedings Provided
Blood, urine, pus, bile, chyle, water, cancer: Cytology of effusions ...............No Proceedings Provided
Cytology for every practitioner ...............No Proceedings Provided
The power of pee: Urinalysis, the forgotten fellow .................................................................No Proceedings Provided
When to delve deep: Indications for and interpretation of bone marrow aspirates ...............No Proceedings Provided
When to panic: Red flags in clinical pathology .................................................................No Proceedings Provided
**Expert²: The Power of Interaction**
Monkey business: Patterns and algorithms in clinical pathology ......................No Proceedings Provided
Pitfalls! Top clinical pathology air balls .................................................................No Proceedings Provided

**Clinical Pharmacology**
Melissa Clark, DVM, PhD, DACVCP
Adverse drug reactions: Common and lesser known...........145
Antibiotic review: What you wish you remembered or might never have learned in vet school......................147
Can I substitute? Ensuring your patients get the right drugs, in the clinic or at a human pharmacy.............149
Pepcid, Prilosec, and prokinetics: Evidence-based use of GI drugs ...............No Proceedings Provided
Puppies, kittens, and drugs: What’s safe for pediatrics? .......152
**Learn then Earn**
Therapeutic drug monitoring: Good for your patients, good for your practice – with Karen Felsted, CPA, MS, DVM, CVPM..............154

**Critical Care**
Dana Clarke, VMD, DACVECC
AKI in the ER: More than just diuresis ...........................................................................No Proceedings Provided
ER tales from the trenches ......................No Proceedings Provided
Fluid therapy controversies ......................No Proceedings Provided
Pneumonia in the ER and ICU ...............No Proceedings Provided
Time to intervene: Interventional radiology in critical care ....157
Too hot to handle: Management of the heat stroke patient...160
Vascular access tips and tricks ...............No Proceedings Provided
vasopressors: Which one? When? .................................164
What’s new in tracheal collapse? ......................167

Justine Lee, DVM, DACVECC, DABT
Common mistakes to avoid in the ER...........................................171
Emergency management and treatment of GDV..............176
Emergency management and treatment of patients with leptospirosis...........................................180
Parvovirus: What’s new in pediatric critical care? ..............185

Nathan Peterson, DVM, DACVECC
Cardiogenic shock: Hold the fluids...........................................190
CPR update: What is RECOVER? .................................192
Crotalid envenomation: Avoid being snake-bitten by snakebites...........................................194
Dystocia: Is it time? .................................................................196
Hypernatremia: What to do with the salty dog......................198
Hyponatremia: Not enough salt? .................................200
Managing trauma patients:
The first critical hour…and beyond.................................202
Refeeding syndrome: When good food goes bad..............205

**Expert²: The Power of Interaction**
Resuscitation endpoints in critical care: It’s not about the journey, it’s about the destination..............208

**Dentistry**
Barden Greenfield, DVM, DAADV
Advanced surgical extractions…going from simply awful to awfully simple ...........................................210
Bites gone wild: Identifying malocclusions in dogs.............213
Knowing what’s abnormal on dental radiographs in dogs and cats...........................................215
Normal dental radiography…you must know this before knowing abnormal ...........................................218
Oral tumors 101: What you absolutely need to know ..............220
Updates on treating feline gingivostomatitis......................223
Why “let’s keep an eye on it” won’t work anymore: Addressing fractured and discolored teeth ..............225

**Learn then Earn**
Why “dental” is a four-letter word: Periodontology for practitioners – with Karen Felsted, CPA, MS, DVM, CVPM ...........................................228

**Dermatology**
Darin Dell, DVM, DACVD
A practical guide for talking to clients about autoimmune skin diseases...........................................229
Canine atopic dermatitis: Integrating new therapies into your strategy...........................................234
Clinical update on dermatophytosis: Better ways to fight the fungus among us...........................................237
